Haedal Protocol Token Audit Report

1 Executive Summary

1.1 Project Information

Description	A Sui Coin Contract
Type	Token
Auditors	MoveBit
Timeline	Thu Mar 13 2025 - Thu Mar 13 2025
Languages	Move
Platform	Sui
Methods	Architecture Review, Unit Testing, Manual Review
Source Code	https://github.com/haedallsd/haedal/
Commits	8c0db8d0620232b7ff478c7924570a707eaadbce

1.2 Files in Scope

The following are the SHA1 hashes of the original reviewed files.

ID	File	SHA-1 Hash
MOV	Move.toml	18ccac5c560891ac7bf511090b66b75c35c651dd
HAE	sources/haedal.move	d81556ff3fe66452bf2fb64ee4c9cff3689d35dd

1.3 Issue Statistic

Item	Count	Fixed	Acknowledged
Total	1	1	0
Informational	0	0	0
Minor	1	1	0
Medium	0	0	0
Major	0	0	0
Critical	0	0	0

1.4 MoveBit Audit Breakdown

MoveBit aims to assess repositories for security-related issues, code quality, and compliance with specifications and best practices. Possible issues our team looked for included (but are not limited to):

- Transaction-ordering dependence
- Timestamp dependence
- Integer overflow/underflow by bit operations
- Number of rounding errors
- Denial of service / logical oversights
- Access control
- Centralization of power
- Business logic contradicting the specification
- Code clones, functionality duplication
- Gas usage
- Arbitrary token minting
- Unchecked CALL Return Values
- The flow of capability
- Witness Type

1.5 Methodology

The security team adopted the "**Testing and Automated Analysis**", "**Code Review**" and "**Formal Verification**" strategy to perform a complete security test on the code in a way that is closest to the real attack. The main entrance and scope of security testing are stated in the conventions in the "Audit Objective", which can expand to contexts beyond the scope according to the actual testing needs. The main types of this security audit include:

(1) Testing and Automated Analysis

Items to check: state consistency / failure rollback / unit testing / value overflows / parameter verification / unhandled errors / boundary checking / coding specifications.

(2) Code Review

The code scope is illustrated in section 1.2.

(3) Formal Verification(Optional)

Perform formal verification for key functions with the Move Prover.

(4) Audit Process

- Carry out relevant security tests on the testnet or the mainnet;
- If there are any questions during the audit process, communicate with the code owner in time. The code owners should actively cooperate (this might include providing the latest stable source code, relevant deployment scripts or methods, transaction signature scripts, exchange docking schemes, etc.);
- The necessary information during the audit process will be well documented for both the audit team and the code owner in a timely manner.

2 Summary

This report has been commissioned by [Haedal Protocol](#) to identify any potential issues and vulnerabilities in the source code of the [Haedal Protocol Token](#) smart contract, as well as any contract dependencies that were not part of an officially recognized library. In this audit, we have utilized various techniques, including manual code review and static analysis, to identify potential vulnerabilities and security issues.

During the audit, we identified 1 issues of varying severity, listed below.

ID	Title	Severity	Status
HAE-1	Centralization Risk	Minor	Fixed

3 Participant Process

Here are the relevant actors with their respective abilities within the [Haedal Protocol Token](#) Smart Contract :

Deployer

- `init` : Initializes the HAEDAL token.

4 Findings

HAE-1 Centralization Risk

Severity: Minor

Status: Fixed

Code Location:

sources/haedal.move#27

Descriptions:

The sender with `treasury_cap` has the ability to modify the coin's `name` , `symbol` , `description` , `url` , which poses a **centralization risk**.

```
/// Update the symbol of the coin in `CoinMetadata`  
public entry fun update_symbol<T>(  
    _treasury: &TreasuryCap<T>,  
    metadata: &mut CoinMetadata<T>,  
    symbol: ascii::String,  
) {  
    metadata.symbol = symbol;  
}
```

Suggestion:

It is recommended to take measures to mitigate this issue.

Resolution:

After minting the required amount of coins, the project team has frozen both the `UpgradeCap` and `TreasuryCap` .

Appendix 1

Issue Level

- **Informational** issues are often recommendations to improve the style of the code or to optimize code that does not affect the overall functionality.
- **Minor** issues are general suggestions relevant to best practices and readability. They don't post any direct risk. Developers are encouraged to fix them.
- **Medium** issues are non-exploitable problems and not security vulnerabilities. They should be fixed unless there is a specific reason not to.
- **Major** issues are security vulnerabilities. They put a portion of users' sensitive information at risk, and often are not directly exploitable. All major issues should be fixed.
- **Critical** issues are directly exploitable security vulnerabilities. They put users' sensitive information at risk. All critical issues should be fixed.

Issue Status

- **Fixed:** The issue has been resolved.
- **Partially Fixed:** The issue has been partially resolved.
- **Acknowledged:** The issue has been acknowledged by the code owner, and the code owner confirms it's as designed, and decides to keep it.

Appendix 2

Disclaimer

This report is based on the scope of materials and documents provided, with a limited review at the time provided. Results may not be complete and do not include all vulnerabilities. The review and this report are provided on an as-is, where-is, and as-available basis. You agree that your access and/or use, including but not limited to any associated services, products, protocols, platforms, content, and materials, will be at your own risk. A report does not imply an endorsement of any particular project or team, nor does it guarantee its security. These reports should not be relied upon in any way by any third party, including for the purpose of making any decision to buy or sell products, services, or any other assets.
